Veraview X800

Dental CBCT Reimagined

Introducing the Veraview X800, Morita's all-in-one 2D/3D digital imaging solution. Veraview X800 delivers vivid, high-definition image clarity, while significantly reducing X-ray dose, artefacts and image distortion.

Veraview X800 captures CBCT, panoramic & optional cephalometric imaging in a compact unit. Offering a 360° scan, 11 FOVs (field of views), including our patented reuleaux volume. Alignment of the patient by the operator is carried out face-to-face, ensuring optimal capture results. The new, intuitive and tilt-able graphical user interface ensures direct and precise control.

In collaboration with f/p design in Munich & Kyoto, Morita's Veraview X800 has taken out the coveted iF Design gold award in the category of medicine/healthcare for product design.

With elegant and pioneering design, Veraview X800 conveys user-friendliness and precision. This design represents the consistent implementation of Morita's company DNA.
